

T-Systems

Domain Name Service.

The service package that puts your name on the Web.

T-Systems' Domain Name Service (DNS) is a comprehensive, low-cost service package designed to help you use your good name on the Internet.

Domain Name Service: So people find you with ease.

Our Domain Name Service caters to all your domain name needs. T-Systems has the expertise required to set up, transfer, and modify your domain names. All you have to do is choose the domain you want to insert before the Top Level Domain (TLD), which takes the form of a suffix such as .de or .com (e.g. www.chosenname.com), and we'll take care of registration and maintenance.

As an ICANN (Internet Corporation for Assigned Names and Numbers) registrar, we can reserve domains for you under the country-specific TLDs .de, .at, .ch, .dk, .li, and .lu, under the generic TLDs .com, .net, .org, .info, .biz, .name, and .coop as well as under the per-country generic domains .co.uk, .org.uk, .co.at, and .org.at. In addition, we can set up domains under other country TLDs ranging from .ac (Ascension Islands) to .co.za (South Africa).

We are also happy to handle the technical DNS operation of your domains. Our service can be customized to suit your precise needs, whether you require primary or secondary DNS, with or without reverse delegation. Whatever you opt for, you can count on the expertise and reliability that have made us a respected partner of DENIC, the central German domain registry. On behalf of DENIC, we operate one of the .de TLD servers, thereby helping support a significant part of Germany's Web infrastructure.

Our Domain Name Service ensures transparent prices and a fair billing system: you only pay for the service you actually need. And if you register multiple domains, you can benefit from our attractive discounts.
